Unlocking AI Velocity with Runtime Governance

The Production Bottleneck

Enterprise AI adoption is stalling. While experimentation is fast, moving AI applications to production is hindered by governance hurdles that add 3–6 months to deployment timelines. Today, only 41% of AI projects successfully transition to full production because traditional security tools aren't built for the non-deterministic nature of LLMs.

The Solution: Runtime Governance

SolidCore is the industry's first runtime governance layer designed specifically for internally-developed AI applications. We bridge the gap between “Move Fast” and “Stay Safe” by providing continuous, real-time control over how your AI interacts with users and data—moving beyond simple design-time validation to active production protection.

SolidCore At-A-Glance

System of Record

Inventory AI use cases, resources, and inference activity, giving organizations real-time visibility into what AI applications are deployed and how users are interacting with them.

Risk Posture

Detect misconfigurations, policy violations, and suspicious usage patterns in real time with built-in alerts and automated workflows for resolution.

Compliance Posture

Map AI activity to frameworks like NIST AI RMF. Generate audit-ready evidence without slowing down your team.

SolidCore Capabilities

Immutable System of Record

Every prompt, completion, and policy decision is captured in a tamper-proof audit trail, ensuring 100% visibility for compliance and legal teams.

Shadow AI Detection

Automatically discover and catalog every AI service and model endpoint being used within your environment in real time.

Zero-Disruption Integration

Deploy in under an hour via a seamless API-based approach. We avoid the friction of heavy SDKs or disruptive proxies that developers typically reject.

Framework Alignment

Achieve "Audit Readiness" instantly with out-of-the-box mapping to NIST AI RMF and your own internal corporate policies.

What Makes SolidCore Different

Enterprise DNA

Built by the founders of HyTrust, our team has a decade-long track record of securing infrastructure for 500+ of the world's largest organizations. We understand why standard security agents fail in the enterprise.

Frictionless Deployment

We offer "Same-Day Governance." Our architecture allows for rapid implementation without requiring a complex integration project, so your developers can focus on building features, not security plumbing.

Runtime vs. Static

While others rely on manual approvals and pre-launch testing with annual reviews thereafter, SolidCore monitors the live interaction.. This ensures that as models evolve and user behavior changes, your guardrails remain "solid."

Ready to Move to Production?

Stop the 6-month wait. Deploy SolidCore today and move your AI applications from the lab to the enterprise in under an hour.
